

MINISTRY OF JOB AND HAPPINESS · INTERNAL BRAND GUIDELINES

TICKET TOUT

Brand Book

Logotype, colour, the physical card, the interface and the don'ts — one reference so the card people carry looks like something they'd want, inside the guidelines the Ministry already set.

v1.0 · 4 September 2026

Prepared for Benjamin Sellami, Communications Adviser
Ticket Tout product & design team

IDENTITY

The logotype

One mark, three approved renderings. No other combination of the icon and wordmark is the logo.

Primary — full colour, on white or on the light surface (#EDEF0). Default everywhere.

Reversed — white mark and wordmark, on institutional blue or any photo dark enough to hold it.

Monochrome — single-colour reproduction (engraving, fax, one-colour print run). No gradients, no cream fill.

Favicon / icon-only — the mark alone, used only where the wordmark can't fit: browser tab, app icon, watermark.

CLEAR SPACE & MINIMUM SIZE

clear space = x, the icon's own width, o

Digital, icon-only
16px min

Print, icon-only
8mm min

TICKET
TOUT

Full lockup minimum width: **88px digital / 30mm print**. Below that, drop to icon-only.

COLOUR

The palette

Everything here is derived from the mandatory institutional blue #1B3A6B, plus two accents that do the work the flat blue can't: amber for attention, gold for a touch of material warmth. These are the exact values in **frontend/src/index.css** — change them there, not here.

 PRIMARY Brand blue #1B3A6B	 ACCENT 1 Accent amber #EFA93C	 ACCENT 2 Gold #C8A75B	 WARM NEUTRAL Paper cream #FBF3E7
 INK Graphite 900 #1B1E22	 INK, MUTED Ink 600 #565C63	 SURFACE Surface 200 #EDEEF0	 SURFACE Surface 000 #FFFFFF
 SEMANTIC Success 600 #1F7A55	 SEMANTIC Pending 600 #B98A18	 SEMANTIC Danger 600 #A02A20	 SURFACE Card gradient graphite 700→900→800

Ministerial rule kept: institutional blue stays the primary identity colour but is never used as a button fill — see the don'ts on p.9. Buttons use graphite 900; amber and gold are reserved for accents, fills and status, never for small body text on a light surface — see the contrast table on the next page.

ACCESSIBILITY

Contrast, measured

Every text/background pair actually used in the running interface, checked before Florine's RGAA AA review lands. Ratios computed with the WCAG 2.1 relative-luminance formula (the same maths behind the WebAIM contrast checker) — script kept in this repo alongside this book. Threshold: 4.5:1 for normal text, 3:1 for large/UI text.

PAIR	FOREGROUND	BACKGROUND	USED FOR	RATIO	AA
Heading blue / white	 #1B3A6B	 #FFFFFF	Section titles	11.3:1	PASS
Heading blue / surface	 #1B3A6B	 #EDEEF0	Headings on app background	9.7:1	PASS
Body ink / white	 #565C63	 #FFFFFF	Body copy, captions	6.8:1	PASS
Body ink / surface	 #565C63	 #EDEEF0	Body copy on app background	5.8:1	PASS
White / graphite 900	 #FFFFFF	 #1B1E22	Primary button label	16.7:1	PASS
Graphite 900 / surface 300	 #1B1E22	 #DDE0E4	Secondary button label	12.6:1	PASS
Balance amount / dark card	 #E9EBEE	 #262A2F	Balance figure	12.1:1	PASS
Balance label / dark card	 #8A9199	 #262A2F	"BALANCE" micro-label	4.53:1	PASS
Countdown gold / dark card	 #B98A18	 #262A2F	QR "expires in" label	4.61:1	PASS
Danger / white	 #A02A20	 #FFFFFF	Errors, "Expired"	7.4:1	PASS
Success / white	 #1F7A55	 #FFFFFF	Validated status	5.3:1	PASS
Accent amber / white	 #EFA93C	 #FFFFFF	— not used as text —	2.0:1	FAIL
Gold / white	 #C8A75B	 #FFFFFF	— not used as text —	2.3:1	FAIL
Gold / surface	 #C8A75B	 #EDEEF0	— not used as text —	2.0:1	FAIL
Graphite 900 / amber fill	 #1B1E22	 #EFA93C	Correct way to use amber: as a fill	8.3:1	PASS

Flagged, not glossed over: accent amber and gold both fail AA (2.0:1 and 2.3:1) as text on white or on the app's light surface. Neither is used as text anywhere in the running interface today. They are approved only as fills, chart segments, borders and graphic accents — always with dark ink (graphite 900) set on top, which measures 8.3:1. This is the rule enforced on p.9.

PHYSICAL MEDIUM

The card, front and back

ID-1 format (85.6 × 54mm), the same dark gradient as the app's balance card so the physical object and the screen feel like one product, not two.

Front — mark, wordmark, employee number, simulation notice

Back — pay QR, notice repeated, issuer line

This is a mockup of the physical card, not a sketch — built at true ID-1 proportions from the same gradient, type scale and colour tokens as the running app, including the `--text-card-number` letter-spacing already reserved for it in `index.css`. It is not a screenshot: the card does not exist as a manufactured object yet.

PHYSICAL MEDIUM

The card, in context

The three moments the card is actually handled: pulled out, kept, tapped. Mockups, built to scale — not photography, which the demonstrator does not have yet.

In hand — held up to a partner's counter, mark reads at a glance.

In a wallet — the amber bar and mark still identify it half-hidden in a card slot.

At a terminal — tapped, the QR on the reverse already validated by the partner app.

IN THE PRODUCT

The card, in the interface

Not mockups: screenshots of the running application, employee space, captured 4 September 2026. This is the only honest check on whether the book above is applicable or decorative.

At rest — client home: balance card, simulation notice, primary and secondary actions in the approved dark/graphite treatment, never institutional blue.

At the moment of payment — QR dialog: countdown in gold on the dark card, notice repeated, single-use / 5-minute rule visible on screen, not just in the spec.

Screenshots, not renders — cropped directly from the demo pack in [docs/demo/screenshots/](#), same source used in the prototype summary and user guide. If the book and the running screen ever disagree, the screen is telling the truth and this page needs updating, not the other way round.

VARIATIONS

Web, social, print

Three sizes the mark has to survive without redrawing anything.

WEB BANNER — 728 × 90

SOCIAL POST — 1080 × 1080

Safe zone: keep the mark and wordmark inside the centre 80% — platforms crop the outer 10% unpredictably on avatars and shares.

Never: place the wordmark over the partner photography grid; always on a flat brand-blue or graphite panel.

A3 POSTER TEMPLATE — 420 × 297MM

Margins: 15mm bleed-safe border on all sides, lockup top-left as the ministerial guideline requires.

Headline zone: lower third, brand-blue on the light surface — never white text on a photograph behind it.

CTA: graphite pill, white label — the same button treatment as the app, not institutional blue.

GUARDRAILS

The don'ts

Not the three classics from every brand guide — the four mistakes our own interface would genuinely tempt someone into.

01**Don't fill a button with institutional blue**

It's the instinctive choice for a "primary" action, and it's exactly the ministerial rule we were handed on day one: #1B3A6B never as a button background. Every button in the running app is graphite 900 or the surface grey instead.

**WRONG — LOOKS LIKE THE MINISTRY SITE****RIGHT — AS SHIPPED****02****Don't set body text in amber or gold on a light surface**

Both accents read as "on-brand and warm" and both fail AA on white or on the app surface — 2.0:1 and 2.3:1, measured on p.4. Use them as fills, borders or icon colour only, with dark ink on top when text is involved.

**WRONG — 2.0:1****RIGHT — 8.3:1****03****Don't redraw the mark by hand for a placement**

The icon is one fixed path at one set of proportions, not a shape to squash into a banner or stretch to fill a circle avatar. Scale it uniformly, or use the icon-only symbol — never distort it.

**WRONG — SQUASHED****RIGHT — UNIFORM SCALE****04****Don't crop the simulation notice out of a screenshot**

Every screen showing an amount carries "Simulation — no real monetary value." Cropping it for a cleaner slide or a nicer social crop is precisely the omission Legal already flagged — see p.7, where both screenshots keep it intact.

SCOPE & GOVERNANCE

Where this book stops

Ticket Tout is a product brand, not a replacement

The ministerial guidelines still apply to the rest of the interface: Marianne for headings, Spectral for body, the lockup top-left with its clear space, institutional blue as identity but never as a button fill. This book governs the product layer that lives inside those guidelines — if a specific page seems to contradict them, that's a call for Benjamin, not a silent override.

Single source of truth for colour

Every hex in this book is read from `frontend/src/index.css` (the `--color-*` tokens under `@theme`), already wired through the interface — change a value there and the whole app moves, per the brief. This PDF documents that file; it does not duplicate it as a separate spec to keep in sync by hand.

WHAT THIS PASS LEFT OUT, AND WHY

- **Full favicon rollout across all three spaces** — the icon-only mark is defined and already used on the login and client screens; confirming it on every partner and admin route is a five-minute grep, tracked separately from this deliverable so the book itself shipped on time.
- **Printed poster and social exports** — the templates on p.8 are specified to the mm and pixel; producing print-ready files for an actual campaign was cut first, as instructed, before touching the logotype or the interface.
- **Photography for the "card in context" page** — no manufactured card exists yet, so p.6 uses scaled vector mockups instead of real photos. Swap them for photography once a physical card is printed.
