TICKET TOUT

Ministère du Job et Bonheur, Digital and Innovation Directorate

Reference: JEB/DNI/2026-002

Version: 1.0, for selected technical service providers 1.1, VERSION REVIEWED BY THE MINISTER

Your contacts within the ministerial cabinet:

- ✓ Florine Pontallac, legal advisor, f.pontallac@job-et-bonheur.fr
- ✓ Thomas Vignal, digital advisor, t.vignal@job-et-bonheur.fr
- ✓ Benjamin Sellami, communications advisor, b.sellami@job-et-bonheur.fr

 **JEB:** BEFORE YOU READ ANY FURTHER. Thomas tells me that the Ministry's messages are landing on your side in something called "quarantine". I asked why, someone mentioned filtering and sender reputation, I did not retain all of it. What I did retain is that you will receive nothing unless you do something. So go to <https://security.microsoft.com/quarantine>, release our messages, and allow the sender so you do not have to do it thirty times over. Check it several times a day, there will be a lot coming. And if anyone ever asks who chose this infrastructure: it was not me, it was Thomas.

 **JEB:** Thomas did a good job on the technical part but he COMPLETELY missed the vision. I corrected it below. What I struck through is his computer-guy vocabulary. What follows below is what I actually want.
Also: CartePro was the working name. I call it the **Ticket Tout**. Because it sums it all up.

1. Institutional Context: the idea of the century

~~As part of the policy to improve purchasing power and workplace well-being carried by the Ministère du Job et Bonheur, the CartePro scheme aims to modernize and extend the principle of dematerialized employee benefits.~~

~~Inspired by the meal-voucher model, CartePro offers a general-purpose tool allowing employers to credit their employees with funds usable across a network of partners referenced by the Ministry.~~

 **JEB:** You know meal vouchers? Nice. But limited. With the Ticket Tout, employees can spend their budget ANYWHERE. At all my... I mean, at all THE Ministry's partners. It's simple, it's revolutionary, I invented it.

This scheme is part of an effort to enhance the value of work and support the local economy.

 **JEB:** That's exactly it but said in a boring way. Let's say instead: **French workers deserve to enjoy life, not just eat a sandwich.** That's the TT spirit.

2. Description of the service ~~expected~~ WANTED

2.1 Functional scope: the partners

...CartePro offers a general-purpose tool allowing employers to credit their employees with funds usable across a network of partners referenced by the Ministry.

 **JEB:** Here are the partners I personally selected for the launch (non-exhaustive list):

- **Poney Dream 78** (pony club, Paris region), excellent for team building and reconnecting with nature
- **KostumParty** (costume shop, Paris 11th), creativity is the key to happiness at work
- **Glaces Artisanales Corrèze** (ice cream maker, online + click & collect), supporting French craftsmanship
- **Chapelier Fontaine** (felt hats, Toulouse), French elegance
- Other partners currently signing on

Thomas told me these partners "don't have a compatible information system." I told him that's YOUR job to make it work. Thanks in advance.

Employee space:

- View available CartePro balance
- History of transactions made
- Generation of a payment QR code to present to partners
- Search and locate referenced partners

 **JEB:** OK all of this is fine. Add a "Minister's Pick" section on the employee homepage, where I can highlight specific partners. I want to be able to change this myself.

Partner space:

- Creation and management of the partner account (~~subject to administrative validation~~)
- Entry and validation of received transactions
- ~~Financial dashboard (amounts received, transactions by period)~~
- Browse the catalog of other referenced partners

 **JEB:** ~~subject to administrative validation~~ → I activate partners myself. I'm the one who decides who is a partner or not. I'm the admin.
On the dashboard: yes of course they want to know how much they've collected. But above all, add an "Official Ministry Partner" badge displayed on their profile. It's flattering.

Administration space (Ministry):

- Validation of partner registration requests
- Account management
- National dashboard
- Management of employer top-ups

 **JEB:** All of that yes. And add a "Featured" button so I can highlight a partner on the public homepage without going through your team. I'm a minister, I don't have time to wait.

2.2 ~~Priority functional~~ Important requirements

- ✓ ~~The balance must be displayed in real time after each transaction~~

 **JEB:** Yes but also: the balance must be displayed POSITIVELY. Not just "€32.50 remaining" but "€32.50 to spend at your favorite partners! 🎉". Tone matters.

- ✓ ~~Use of the payment QR code must be able to work in degraded mode (limited connectivity)~~

 **JEB:** Degraded mode = Thomas stressing out. Make something simple that works online. People have internet anyway.

- ✓ ~~The partner registration process must include a manual validation step by the admin~~
- ✓ ~~Transactions must be irreversible once validated~~

 **JEB:** Irreversible, yes. But if I need to cancel something, I need to be able to. With my admin account.

3. Technical constraints (Thomas's version, to read but not follow blindly)

3.1 Architecture

- ✓ Responsive web application
- ✓ Backend with relational database
- ✓ Documented RESTful API

 **JEB:** OK for all that.

3.2 Transaction security (removed)

~~Transaction data must be stored in an integral, non-modifiable form after validation~~

~~QR codes must be single-use or have a limited validity period (max 5 minutes)~~

~~Connections must be encrypted (HTTPS mandatory)~~

 **JEB:** I'll let Thomas handle security, that's his thing. But careful: **not too much friction for the user**. If the QR code expires in 5 minutes and the customer is at checkout at the pony club, that's a problem. I want at least 30 minutes.

3.3 Interoperability (useless section)

~~The API must expose an endpoint allowing a third-party system to query an employee's balance (planned for future integration with employer HRIS systems)~~

 **JEB:** Thomas loves writing things for "future integration." We're building an MVP here. Forget interoperability with HRIS systems. Focus on what works NOW.

4. Expected deliverables

Week 1: proof of concept (Friday project review)

- ✓ Browsable partner catalog (with the real partners listed above, not made-up ones)
- ✓ Employee space with balance and history
- ✓ Payment QR code (even static is fine)
- ✓ Oral presentation

JEB: I'M ON TV THURSDAY MORNING. This matters to me. Don't let me down.

Week 2: final version

- ✓ All functional spaces
- ✓ Complete transaction (QR → partner validation)
- ✓ Admin dashboard + "Minister's Pick"
- ✓ Technical doc + retrospective

5. ~~Points of attention~~ A word from the Minister

The TT scheme is not a payment service in the regulatory sense

JEB: No need to read Thomas's disclaimers. What matters is simple: you're building something that lets French people enjoy life thanks to their employer. It's beautiful. It's useful. Do it well.

The partners I chose are good people. I know them personally. Make sure their interface is nice, they deserve it.

Jean-Eudes Berlier, Ministre du Job et Bonheur ✨
