

Where the app stands

What the app actually does today — not what's planned or half-written in the code.

🕒 under 2 minutes to read

WORKS RIGHT NOW

- ✓ **Logging in** as a citizen (client) account — reliable, fast.
- ✓ **Seeing your balance** on the home screen, clearly labelled "Simulation — no real monetary value" everywhere money appears.
- ✓ **Generating a payment QR code** — a real, scannable code appears instantly with a live countdown. It's single-use and stays valid for about half an hour.
- ✓ **Browsing partner businesses** — a real list of 6 approved shops (a bakery, a pharmacy, a garage, a bookshop, a hairdresser, plus one generic test entry), each with category and region.
- ✓ **Searching and filtering** that list by name or category — updates live as you type.
- ✓ **Opening a business's detail page** — name, category, region, address.

NOT BUILT / NOT WORKING YET

- ✗ **Purchase history on the home screen** isn't available yet — that part of the server hasn't been finished.
- ✗ **The shop (partner) side** exists as a login only — after signing in it's a blank page with just a logout button. No screen yet to scan or accept a citizen's QR code.
- ✗ **The oversight (admin) side** is the same — login works, but the screen behind it is blank. No screen yet to review or approve new shop applications.
- ✗ **Signing up for a new account** isn't available in the app at all. Every account (citizen, shop, or admin) has to be created ahead of time by the dev team.
- ✗ **Adding funds to a balance** isn't available anywhere yet — balances are fixed at whatever they were set to when the account was created.

NEXT WEEK: COMPLETE

- ✓ **Full transaction flow** — a citizen's QR code scanned and validated by a shop, end to end.
- ✓ **The shop (partner) space** — validating a payment, a financial dashboard, browsing the partner catalog.
- ✓ **The oversight (admin) space** — approving new shop applications, a national dashboard, and "Minister's Pick" to highlight a partner on the citizen home screen.
- ✓ **Purchase history** on the citizen home screen.
- ✓ **Technical documentation and project retrospective.**

GOOD TO KNOW

- The rebrand from "CartePro" to "**Ticket Tout**" is complete — the running app shows the new name and logo everywhere, no old branding left.
